Plotting Using Pandas

Jason P. Browning, Ph.D., MBA
Data & Analytics Consultant

@jason_from_ky

Overview

Exploring different plot types

Selecting data to be plotted

Adjusting formatting

Common Plot Types

Line

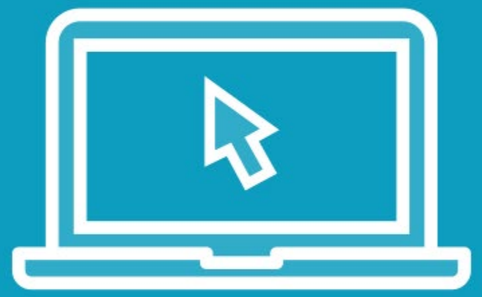
Scatter

Bar

Histogram

Area

Demo



Line plot is the default plot type in matplotlib

Importing a CSV file

```
df = read_csv(“file_to_import.csv”)
```

```
df = read_csv( “myfile.csv”,

 names = [“City, Population”],

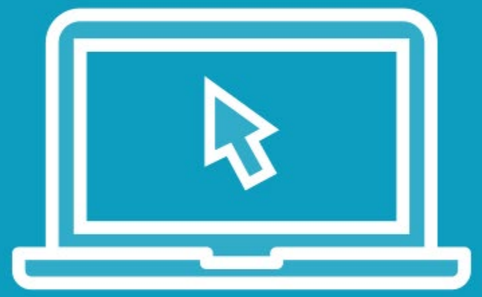
 index_col = 0,

 usecols = [0, 2]

)
```

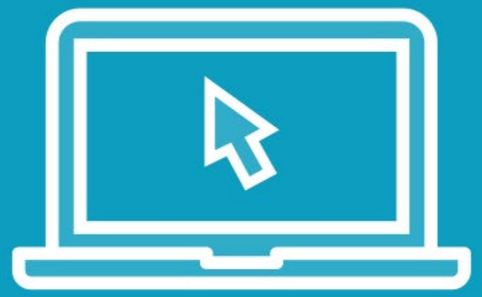
- Names can be used to specify a list of column names when no header row is present
- Index_col specifies the column to use as the row label of the DataFrame
- Usecols specifies the columns in the dataset that you would like to import

Demo



Creating a DataFrame from a CSV file

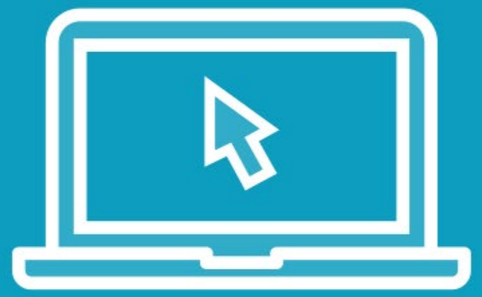
Demo



Creating a scatter plot

- Useful for visualizing relationships between data points

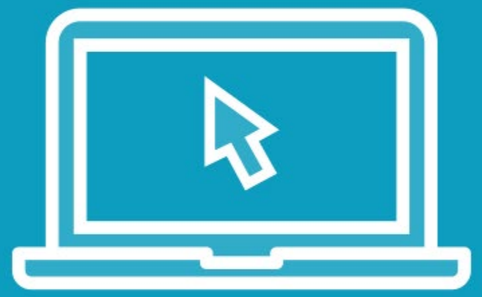
Demo



Creating a bar plot

- Useful when you are showing or comparing segments of information or categorical data

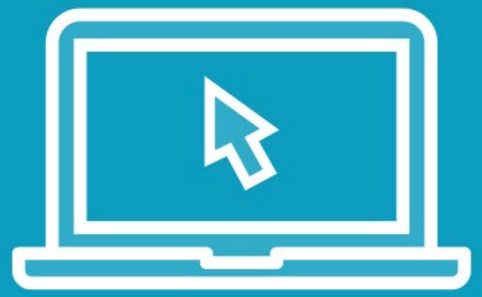
Demo



Creating a histogram

- Useful to represent frequency data

Demo



Creating an area chart

- Useful when you want to understand how values develop and are composed over time

Summary

Creating common plot types

- Line
- Scatter
- Bar
- Histogram
- Area

Using the kind argument to specify type

Selecting and loading data
